

# Data Intake Report

Name: G2M Case Study  
Report date: <19/06/2021>  
Internship Batch: LISUM01  
Version: <1.0>  
Data intake by: Data Glacier  
Data intake reviewer: Diaz Aurelli Salsabila  
Data storage location: <location URL eg: github, cloud>

## Tabular data details:

### Customer\_ID

<b>Total number of observations</b>	4
<b>Total number of files</b>	1
<b>Total number of features</b>	49,172
<b>Base format of the file</b>	.csv
<b>Size of the data</b>	1.363 MB

### Transaction\_ID

<b>Total number of observations</b>	3
<b>Total number of files</b>	1
<b>Total number of features</b>	440,099
<b>Base format of the file</b>	.csv
<b>Size of the data</b>	8.788 MB

### City

<b>Total number of observations</b>	3
<b>Total number of files</b>	1
<b>Total number of features</b>	20
<b>Base format of the file</b>	.csv
<b>Size of the data</b>	1 KB

### Cab\_data

<b>Total number of observations</b>	7
<b>Total number of files</b>	1
<b>Total number of features</b>	369,393
<b>Base format of the file</b>	.csv
<b>Size of the data</b>	21.124 MB

**Note: Replicate same table with file name if you have more than one file.**

**Proposed Approach:**

- Assumptions
  - Outliers are present in Price\_Charged feature but due to unavailability of trip duration details ,we are not treating this as outlier.
  - Profit of rides are calculated keeping other factors constant and only Price\_Charged and Cost\_of\_Trip features used to calculate profit.
  - Users feature of city dataset is treated as number of cab users in the city. we have assumed that this can be other cab users as well (including Yellow and Pink cab)
- Approach :
  - Separate the observations to different cells in Microsoft Excel.
  - Import the file into the Jupiter for data processing.
  - Process the EDA notebook in Jupyter.
